

<b>Andrew Dombowsky</b>			
Task	Start	End	Total
Setup EC2 Instance			1:23:12
Setup LAMP Server			0:34:09
Develop MySQL Tables			1:18:36
Team Meeting and Database Design			1:10:11
Work on SQL Tables			0:25:15
Fixed SQL Table relationships			0:35:17
Initial PHP work for database integration			3:12:50
Import and update tables into new db			0:35:12
PHP and HTML for client-server interaction			3:50:10
Session setup and DB Query debug			2:44:54
SQL Class debug and rewrite			3:22:35
Ajax implementation to match fbID with internal User IDs			3:30:12
Finished Query methods and initial parsing for account creation			4:18:22
Fixed account creation and some Redirect issues			3:45:26
Debugged Calendar Functionality			3:12:50
Tinkered with redirect options for new users			2:10:44
Debug Ajax replies and finally fix new user redirects			3:32:50
Finish course registration page for new users and create new page for sidebar			2:40:39
Add e-mail reminder functionality			3:20:45
Fix course registration bugs from API changeover			2:20:15
Fix e-mail reminder to work with new db table layout			2:20:15
<b>Diya</b>			
Task	Start	End	Total
Set up domain name			1:10:23
Set up facebook login functionality			1:15:24
Facebook login button UI design			0:32:22
Team meeting			1:30:00
Set up the first login page			2:30:00
first time login page, facebook login, main page integration			0:30:00
change the course info enter table for first login page			1:10:00

create php for passing course info to database for comparison			1:25:33
telerik framework learning process			2:00:18
create php for extracting the calendar info for reminder			1:00:10
debug for only getting the tasks info into the reminder			2:10:45
create php for pop up reminder in the main panel			2:30:23
debug after integration of main panel and pop up reminder			1:22:34
create a new popup php in order to show			1:12:22
modify the pop up page style			0:20:20
create php for new real time reminder system			3:20:10
debug for new reminder system			2:20:20
meeting			1:30:00
change the date format in order to extract the correct date info			1:33:23
decorate reminder table			1:10:00
make a default content for location/info if they either of them are NULL			0:25:23
<b>Mengxi(Luke) Zhang</b>			
Task	Start	End	Total
Set up the local server for UI design			0:30:00
Design the UI structure			0:30:00
Implement the UI sidebar and several pages with HTML/CSS/JS/PHP			2:00:00
Learning React framework			3:00:00
Implement Calendar with flash memory with JS (without database)			3:00:00
Improved the Calendar with JQuery libraries			2:00:00
Set up local database using XAMPP with phpmyadmin			1:00:00
Create php file to delete tile information			0:45:00
Create php file to upload tile information			0:45:00
Create php file to download tile information			0:45:00
Learning and using Ajax function from JQuery to connect js and php			2:00:00
Debug to make the calendar work on the EC2 server			3:12:50
Study the new react calendar UI plugin			2:30:00
Create js interface for the react UI plugin			0:45:00

Create js and php files to download and display entries information on the UI			3:00:00
Create js and php files to delete entries information from database and UI			1:30:00
Create html, js and php files to update entries information on database and UI			2:15:00
Handle exception for invalid inputs of date, start-time and end-time			1:15:00
Push the Calendar part to the server (separate folder), and debug			1:30:00
Integrate the new calendar to the project (login and register courses), and debug			1:30:00
Look for a better Calendar UI framework which is portable to our project			2:30:00
Manipulate with the new UI framework as a separate web project			1:00:00
Make a js interface file connecting our project to the calendar UI framework			0:45:00
Modify the existing js and php files to work with the new interface			2:00:00
Add time selector framework to the addTask dialog			1:00:00
Debug issue of multiple jslink overwriting each other in html			2:00:00
<b>Qianzhen Gao (Chance)</b>			
Task	Start	End	Total
Launch a DB Instance in Amazon RDS			0:15:00
Setup Amazon Simple Storage Service			8:10:00
try local connection to aws instance			1:30:00
fix aws db connection			2:09:00
learn and put table into aws db			1:17:00
learn and crawl a https page (ubc using https)			1:11:00
level 1 crawl the ubc course page (dept info)			4:06:00
modified level 1 crawl page website addresses			0:46:00
level 2 crawl the ubc course page (course info)			3:02:00
modified level 2 crawl page website addresses			0:20:00
level 3 crawl the ubc course page (section info)			4:10:00
modified level 3 crawl page website addresses			0:32:00
get one course section page info			2:40:00
store one course section page info to db			1:37:00
get multiple cours section pages' info			0:35:00
store multiple course section pages' info to db			12:48:00
check the db course info			1:00:00
record the error info page			0:20:00

update ubc course page info in db			5:40:00
ensure the db course info is correct			0:30:00
assist Andrew to write some mysql query			1:00:00
find and learn the jquery calendar UI plugin			3:19:00
assist Luke to implement the jquery calendar UI plugin			2:03:00
modified db calendar table			0:15:00
assist Luke to implement the jquery calendar UI plugin function			1:15:00
assist Andrew to write php functions in db that transfer course info to user calendar			1:07:00
learn the new full calendar plugin			2:03:00
modified the php functions gave to Andrew before			1:04:00
implemented the full calendar mapping event functions			3:10:00
assist Luke to implement the full calendar display			1:46:00
write the user manual for the website			2:30:00
<b>Pietr</b>			
Task	Start	End	Total
Team meetin			1:30
Attempt connection to instance (fail)			1:00
mySQL tutorial			2:00
